Application/Control Number: 09/420,503

Art Unit: 2142

1. Claims 1-15 are pending.

2. Applicant's arguments with respect to claims 1-15 have been considered but are most in view of the new ground(s) of rejection.

Double Patenting

Claims 1-15 rejected under the judicially created doctrine of double patenting over claims 1-30 of U. S. Patent No. 5,764,992 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The subject matter claimed in the instant application is fully disclosed in the patent and is covered by the patent since the patent and the application are claiming common subject matter, as follows: a method for updating software or operating system on server which subsequently updated the client machines on network.

Patent '992 does not detail a client machine causing a plurality of network client computers are booted to received an updated software. It was clearly that in the well-known art when the operating system software on server is updated by itself or by a remote computer then the other client computers would be updated [see Craig reference]

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-15 are rejected under 35 U.S.C. § 103 as being obvious over Lundin et al [Lundin 5,339,430] in view of Craig et al [Craig 6,266,809 B1].
- 4. As per claim 1, Lundin discloses a method comprising a network computer (NC) client that is configured differently than a first operating system software in effect by replacing a first set of one or more system volumes maintained at a NC server containing the first operating system software with a second set of one volume (or more system volumes) maintained at the NC server containing second operating system software [Lundin, a software (i.e.: operating system software) is modified, replaced by a new version by using object-oriented programming technique, abstract]. It was clearly that the object-oriented programming allows the first computer (i.e.: client computer) could initiate the replacing software on the second computer (i.e.: server computer) or reverse.

Lundin does not teach in detail causing a plurality of NC clients are booted to receive operating system software. It is well-known in the art that the operating software (i.e.: firmware) on network computers could be updated by the boot image on a network server as taught by Craig.

Application/Control Number: 09/420,503

Art Unit: 2142

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the technique of updating the network computers by the boot image on server as taught by Craig into the Lundin's apparatus in order to implement the technique of modified and replaced software between computers. Doing so would reduce the management requirements fro a computer network and provide a dynamic, efficient and friendly approach to updating software on the network client computers.

Page 4

- 5. Claims 2,3,11-14 and 15 contain similar limitation set forth the rejected claimed

 1. Thus, claims 2,3,11-14 and 15 are rejected for the same rationale set forth in claim 1.
- 6. As per claims 4,7,9 Lundin-Craig disclose the NC client causing those of the plurality of NC clients that subsequently open an application to utilize a modified version of the application by replacing the first set of one or more system volumes, wherein the first set of one or more system volumes further comprises application software which is equivalent to the modified software copy or the partially replaced software.
- 7. As per claim 5, Lundin-Craig disclose wherein at least one NC client is not rebooted for a period of time after replacing the first set of one or more system volumes as inherent feature or regenerating object code or booting process.
- 8. As per claims 6,8,10 Lundin-Craig disclose the operating software as UNIX and MS-DOS as inherent features of operating software.
- 9. Claims 1-15 are rejected under 35 U.S.C. § 103 as being obvious over Kullick et al [Kullick 5,764,992] in view of Craig et al [Craig 6,266,809 B1].

Application/Control Number: 09/420,503

Art Unit: 2142

10. As per claim 1, Kullick discloses a method comprising a network computer (NC) client that is configured differently than a first operating system software in effect by replacing a first set of one or more system volumes maintained at a NC server containing the first operating system software with a second set of one volume (or more system volumes) maintained at the NC server containing second operating system software [Kullick, a software (i.e.: operating system software) is automatically replaces itself by a new version, the new version is replaced an older version can reside on the client computer or server, abstract].

Page 5

Kullick does not teach in detail causing a plurality of NC clients are booted to receive operating system software. It was well-known in the art that the operating software (i.e.: firmware) on network computers could be updated by the boot image on a network server as taught by Craig.

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to incorporate the technique of updating the network computers by the boot image on server as taught by Craig into the Kullick's apparatus in order to implement the technique of modified and replaced software between computers. Doing so would reduce the management requirements fro a computer network and provide a dynamic, efficient and friendly approach to updating software on the network client computers.

- 11. Claims 2,3,11-14 and 15 contain similar limitation set forth the rejected claimed
- 1. Thus, claims 2,3,11-14 and 15 are rejected for the same rationale set forth in claim 1.

Application/Control Number: 09/420,503 Page 6

Art Unit: 2142

12. As per claims 4,7,9 Kullick-Craig disclose the NC client causing those of the plurality of NC clients that subsequently open an application to utilize a modified version of the application by replacing the first set of one or more system volumes, wherein the first set of one or more system volumes further comprises application software which is equivalent to the modified software copy or the partially replaced software.

- 13. As per claim 5, Kullick-Craig disclose wherein at least one NC client is not rebooted for a period of time after replacing the first set of one or more system volumes as inherent feature or regenerating object code or booting process.
- 14. As per claims 6,8,10 Kullick-Craig disclose the operating software as UNIX and MS-DOS as inherent features of operating software.
- Any inquiry concerning this communication or earlier communications from the examiner should be directed to examiner Thong Vu, whose telephone number is (703)-305-4643.

The examiner can normally be reached on Monday-Thursday from 8:00AM- 4:30PM. If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, David Wiley, can be reached at (703) 308-5221.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-9700.

Any response to this action should be mailed to: Commissioner of Patent and Trademarks, Washington, D.C. 20231 or faxed to:

After Final

(703) 746-7238

Official:

(703) 746-7239

Non-Official (703) 746-7240

Hand-delivered responses should be brought to Crystal Park 11,2121 Crystal Drive, Arlington. VA., Sixth Floor (Receptionist).
